According to our (Global Info Research) latest study, the global Wireless Industrial IoT Sensors market size was valued at USD 6402.2 million in 2023 and is forecast to a readjusted size of USD 14710 million by 2030 with a CAGR of 12.6% during review period.

The industrial Internet of Things (IIoT) refers to the use of internet-connected sensors and devices in the industrial sectors, such as manufacturing, energy, automotive, healthcare, life sciences, and agriculture.

Wireless Industrial IoT Sensors are designed to collect data without the use of wires. They can detect and capture data in any situation, and have now found application in various sectors, including manufacturing/industrial sector. Wireless Industrial IoT Sensors carry a tiny built-in radio transmitter and receiver, which means they can communicate with each other without being hard-wired together. This allows them to go further away from a power source and transmit more valuable information, such as the complex machine data.

Wireless Industrial IoT Sensors can capture information such as vibration, temperature, pressure, humidity, and magnetic flux among others. It can also capture air quality or noise levels, and can measure machine parameters like flow rate, speed or torque.
