According to our (Global Info Research) latest study, the global Wireless Mesh Network (WMN) market size was valued at USD 8741.1 million in 2023 and is forecast to a readjusted size of USD 15210 million by 2030 with a CAGR of 8.2% during review period.

A wireless mesh network (WMN) is a communications network made up of radio nodes organized in a mesh topology. It is also a form of wireless ad hoc network. Wireless mesh networks often consist of mesh clients, mesh routers and gateways. The mesh clients are often laptops, cell phones and other wireless devices while the mesh routers forward traffic to and from the gateways which may, but need not, be connected to the Internet. The coverage area of the radio nodes working as a single network is sometimes called a mesh cloud. Access to this mesh cloud is dependent on the radio nodes working in harmony with each other to create a radio network. A mesh network is reliable and offers redundancy. When one node can no longer operate, the rest of the nodes can still communicate with each other, directly or through one or more intermediate nodes. Wireless mesh networks can self-form and self-heal.

In the American market, Major manufacturers include Strix Systems Incorporated, ABB, Cisco Systems, Digi International, Aruba Networks, and General Dynamics Mission, Systems, Cambium Networks, Synapse Wireless, Vigilent, Firetide, Rajant Corporation, FluidMesh Networks, ArrowSpan and Concentris Systems, etc.
