Abstracts

Wireless mobile machine control is a system used in heavy machinery to control the machine movement remotely, precisely, reliably, and accurately. Wireless mobile machine control system incorporates CANbus protocol for enabling Bluetooth and WiFi wireless communications. The wireless mobile machine controls market includes hardware and software solutions that provide control of various processes, from positioning to construction.

SCOPE OF THE REPORT:

This report focuses on the Wireless Mobile Machine Control in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. According to the report, one driver in the market is increased safety of machines and personnel. Construction sites have always been hives of activity. The processes are carried out using heavy machinery including rounds of scrapers and trucks repeatedly. Construction schedules are continuously tightening, which lead to multiple operations being carried out at the same time and in the same work area. The work areas are often difficult to access due to relatively confined spaces. Thus, there is an obvious safety concern with surveyors walking around in such conditions. As the use of machine mobile control reduces the need for on-the-ground survey and construction crew string lining, there is a lesser probability of workplace injury.

The worldwide market for Wireless Mobile Machine Control is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
