## Abstracts

According to our (Global Info Research) latest study, the global Wireless Mobile Video Surveillance System market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.

**Technology development and progress:** With the increasing development of wireless communication technology, the transmission bandwidth continues to increase, and the real-time information processing capabilities of communication terminals are rapidly enhanced, which has significantly improved the real-time, stability and clarity of wireless video surveillance. This provides a technical foundation for the widespread application of wireless mobile video surveillance systems.

**Flexibility and convenience:** Wireless mobile video surveillance systems are highly flexible and convenient. Traditional wired monitoring systems have many inconveniences in wiring, installation and maintenance, but wireless monitoring systems are not subject to these restrictions and can be easily deployed wherever monitoring is needed, especially when wiring is difficult or temporary monitoring needs are required, the advantages of wireless monitoring systems are even more obvious.

**Cost-effectiveness:** The wireless mobile video surveillance system has flexible networking, good scalability, and the ability to flexibly move terminal equipment during use, which makes it more cost-effective than wired surveillance systems in certain application scenarios. Especially when the monitoring points are scattered and far away from the monitoring center, or the monitored objects are not fixed, using wireless mobile video surveillance systems can save a lot of wiring costs and installation and maintenance costs.

Expanding application demand: With the progress of society and people's increasing demand for security, the application scenarios of video surveillance are also constantly expanding. Wireless mobile video surveillance systems can meet various flexible, mobile, and temporary surveillance needs, such as home security, car monitoring, public safety, etc. The expansion of these application demands provides a broad market space for the development of wireless mobile video surveillance systems.
