Wireless network coverage extension products for the power industry refer to specialized communications equipment and solutions designed to address insufficient wireless coverage, signal blind spots, and complex connectivity requirements during power grid production and operation. These products typically leverage technologies such as wireless local area networks (WLAN), Wi-Fi, 4G/5G private networks, wireless relays, micro and pico base stations, and mesh networks. By extending and enhancing signal coverage, they ensure smooth wireless communication within power stations, transmission lines, substations, distribution rooms, factory campuses, and even remote areas.

With the accelerated development of smart and digital grids, power companies require independent, secure, and highly reliable wireless private networks to support critical operations such as dispatching, security, operations and maintenance, and real-time monitoring. Wireless network extension products can be flexibly deployed in substations, distribution networks, and transmission lines, meeting the high bandwidth and low latency requirements of power private networks and driving market expansion.
