According to our (Global Info Research) latest study, the global Wireless Patient Monitoring Devices market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Wireless Patient Monitoring Device is a technology that is used to enable monitoring of patients outside of conventional clinical settings (e.g. in the home). These devices have the advantage of allowing patient movement without restricting patients to a bedside monitor with a hard-wired connection. It simplifies the accessibility towards health care resources, reduces healthcare costs, allows earlier diagnosis and prevents misdiagnosis. But the most important advantage of using patient monitoring systems in healthcare facilities is that it improves communication between patients and their healthcare providers by simplifying data transmission. Also this is an efficient way to address the issue of staff shortage which is a common factor observed in various large healthcare institutions. This reduces the strain on the resources such lab tests, beds, staff and other healthcare resources.

The wireless patient monitoring technology allows healthcare providers to reach out to wider array of healthcare seekers by not confining to the confines of the traditional healthcare facility. This technology generates real time data from the patient's physiological conditions to facilitate better diagnosis and devise better strategies for emergency measures. Also, the increasing prevalence of various diseases such as respiratory diseases, strokes and heart failures, hypertension, diabetes, renal diseases, epilepsy etc. has put a strain on existing healthcare resources in form of hospital beds, conventional diagnostic resources etc. along with healthcare staff in form of physicians, nurses, etc. Wireless patient monitoring devices reduces this stress as it allows for

better data transmission within or outside the boundaries of a healthcare facility. Also, favorable government initiatives to promote the usage are expected to positively impact the market growth over the forecast years.
