According to our (Global Info Research) latest study, the global Wireless Power Integrated Circuits (ICs) market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Wireless Power Integrated Circuits (ICs) are a type of electronic component that allows wireless transfer of power between devices using electromagnetic fields. These ICs typically consist of a transmitter and a receiver circuit, with the transmitter converting the input DC power into a high frequency AC signal that is transmitted wirelessly to the receiver. The receiver then converts this AC signal back to DC power to be used by the device. Wireless power ICs are commonly used in a range of applications, including consumer electronics, medical devices, and automotive systems, among others. They offer the convenience of wireless charging without the need for cables and connectors, making them an attractive option for mobile and portable devices.
