The wireless remote water meter is based on the traditional meter and uses special micro-power transceiver and integrated modules to realize wireless transmission and command reception of meter measurement data and other data, and perform corresponding command operations.

Wireless remote water meters transmit data based on narrowband Internet of Things technology and are connected to the server in real time without the need for intermediate collection equipment. There is no need to run wires during installation, simplifying equipment installation and reducing manpower, and can analyze water meter data. Real-time monitoring, saying goodbye to the inconvenience of manual meter reading. Far EastOne water meters deal with issues such as real-time data collection, water meter measurement, and water flow supervision. Therefore, it has significant competitive advantages in these aspects. Since the water volume is collected in real time, this method has a strong deterrent effect, preventing customers from tampering with the water meter, thereby greatly reducing water theft by users.
