Abstracts

The global Wireless Swim Timing System market size is expected to reach \$ 669 million by 2032, rising at a market growth of 8.1% CAGR during the forecast period (2026-2032).

The wireless swimming timing system is a timing device that uses wireless communication technology (such as radio frequency, Bluetooth, Wi-Fi, etc.) to automatically collect, transmit and process athletes' swimming results. It replaces the traditional wired timing method, has real-time, high-precision and anti-interference capabilities, and can automatically record athletes' starting reaction time, segment results and wall contact time, and synchronously transmit them to the display terminal or data processing system.

This report studies the global Wireless Swim Timing System production, demand, key manufacturers, and key regions.
