According to our (Global Info Research) latest study, the global Wireless Wall-mounted AP market size was valued at US\$ 244 million in 2024 and is forecast to a readjusted size of USD 314 million by 2031 with a CAGR of 3.7% during review period.

In computer networking, a wireless access point (WAP), or more generally just access point (AP), is a networking hardware device that allows other Wi-Fi devices to connect to a wired network. As a standalone device, the AP may have a wired connection to a router, but, in a wireless router, it can also be an integral component of the router itself. An AP is differentiated from a hotspot which is a physical location where Wi-Fi access is available. Wireless access points work to extend the range of your network within a building, office, or home. The wireless wall-mounted AP can be fixed on the wall or ceiling.

Amidst the rapid advancement of wireless communication technology, the Wireless Wall-mounted Access Point (AP) is emerging as a prominent network device, riding the wave of market trends. With its convenient installation method and sleek design, the Wireless Wall-mounted AP is swiftly becoming the preferred network solution across various settings, including offices, hotels, malls, and homes. This solution not only offers users a stable and high-speed wireless connection but also eliminates the complexities of traditional wiring, significantly enhancing the flexibility and convenience of network coverage. As the Internet of Things (IoT) technology gains traction, the demand for stable wireless networks and extended coverage is growing, presenting a promising market outlook for Wireless Wall-mounted APs.
