## Abstracts

The wireline riser tensioner system is responsible for applying the necessary tension to the wireline riser to keep it in tension and prevent it from buckling or collapsing under its own weight or environmental forces such as currents, waves, and wind. This tensioning system typically consists of hydraulic or pneumatic cylinders, sheaves, control systems, and associated equipment designed to regulate and maintain the tension in the wireline riser.

According to our (Global Info Research) latest study, the global Wireline Riser Tensioner market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.

A wireline riser tensioner is a vital component used in offshore drilling operations to maintain the tension in the wireline riser system. The wireline riser is a conduit that connects the subsea wellhead or blowout preventer (BOP) to the surface vessel or platform during drilling, completion, intervention, or production activities. It allows for the passage of various tools, equipment, and fluids between the surface and the subsea well.
