Abstracts

A riding boot is a boot made to be used for horse riding. The classic boot comes high enough up the leg to prevent the leathers of the saddle from pinching the leg of the rider, has a sturdy toe to protect the rider's foot when on the ground and has a distinct heel to prevent the foot from sliding through the stirrup. The sole is smooth or lightly textured to avoid being caught on the tread of the stirrup in the event of a fall.

SCOPE OF THE REPORT:

This report focuses on the Women's Riding Boots in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The modern riding boot is relatively low-heeled, with a heel of less than one inch, though historically a higher heel was common, as it has always been critically important for riding boots to prevent the foot from slipping through the stirrup. Today, only some styles of cowboy boot retain a higher heel than other modern riding boots.

The worldwide market for Women's Riding Boots is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
