According to our (Global Info Research) latest study, the global Wood Plastic Composite Co-extrusion Decking market size was valued at US\$ 568 million in 2025 and is forecast to a readjusted size of US\$ 1075 million by 2032 with a CAGR of 9.6% during review period.

Wood Plastic Composite Co-extrusion Decking refers to a type of outdoor decking product made by combining wood fibers or wood flour with thermoplastic resins through compounding and co-extrusion technology. The product usually has a wood-plastic composite core and a protective outer cap layer. The core layer commonly uses wood flour, bamboo powder, recycled polyethylene, polypropylene, PVC, mineral fillers and processing additives, while the surface layer is generally made from weather-resistant polymers such as PE, PVC, ASA or other modified plastic materials. During the co-extrusion process, the inner core and outer protective layer are formed together, so the surface layer is closely bonded to the substrate and provides better resistance to moisture, stains, scratches, mildew, UV radiation and color fading.

Compared with traditional wood decking and ordinary WPC decking, Wood Plastic Composite Co-extrusion Decking has stronger outdoor durability and lower maintenance requirements. Its main raw materials include wood powder, plastic resin, recycled plastics, color masterbatch, stabilizers, coupling agents, lubricants, antioxidants, UV absorbers and surface modifiers. The product is mainly used in outdoor residential and commercial flooring applications, including terraces, gardens, balconies, poolside areas, parks, boardwalks, hotels, resorts and public landscape projects. Downstream customers mainly include homeowners, real estate developers, landscape engineering companies, construction contractors, building material

distributors and outdoor decoration companies. Because it combines the natural appearance of wood with the durability of plastics, it has become an important substitute for natural timber decking and anti-corrosion wood.

In 2025, global Wood Plastic Composite Co-extrusion Decking production reached approximately 14.8 million square meters, with an average market price of around US\$37.29 per square meter.

The Wood Plastic Composite Co-extrusion Decking market is developing steadily as outdoor flooring materials continue to shift toward low-maintenance, durable and environmentally friendly composite products. One of the main industry trends is the upgrade from traditional uncapped WPC decking to capped co-extrusion decking. The protective surface layer improves the product's resistance to fading, staining, moisture and weathering, making it more suitable for long-term outdoor use. As consumers place more emphasis on appearance, service life and maintenance cost, co-extrusion WPC decking is gaining wider acceptance in residential renovation, garden decoration and commercial landscape projects.

Product innovation is also an important trend. Manufacturers are improving wood grain texture, surface embossing, color stability, anti-slip performance and scratch resistance to make the product closer to natural wood in appearance while maintaining the advantages of composite materials. Solid boards, hollow boards, grooved boards, hidden fastener systems and multi-color surfaces are becoming more common. In mid- and high-end markets, buyers are increasingly choosing products based on durability, environmental performance, design style and long-term cost rather than only initial purchase price.

From a regional perspective, North America is a mature market with strong demand from residential decks, outdoor living spaces and home renovation. Europe has stable demand due to its focus on sustainable building materials, recyclable products and timber substitution. Asia-Pacific is both a major manufacturing base and a fast-growing consumption market. China plays an important role in production and export, while Southeast Asia, Australia and other regional markets are gradually increasing adoption in residential, tourism and public landscape projects. The Middle East and Latin America also show growing demand in hotels, resorts, waterfront projects and commercial outdoor spaces.

The main growth drivers include rising demand for outdoor leisure spaces, growth in residential renovation, expansion of landscape engineering, and increasing preference

for low-maintenance materials. Compared with natural wood, co-extrusion WPC decking reduces the need for painting, sealing and anti-corrosion treatment, which helps lower long-term maintenance costs. Environmental awareness is another driver, as many products use recycled plastics and wood powder, supporting green building material trends. In addition, urbanization, tourism facility construction, public infrastructure upgrades, broader building material retail channels and improved extrusion technology are all supporting market growth. However, resin price fluctuations, uneven product quality among suppliers and competition from wood, stone, ceramic tiles and PVC decking remain challenges. Overall, the market is expected to maintain positive development momentum as product performance and consumer acceptance continue to improve.
