Abstracts

The global Wood Preservative Treatment Chemical market size is expected to reach \$ 2517 million by 2032, rising at a market growth of 5.9% CAGR during the forecast period (2026-2032).

A Wood Preservative Treatment Chemical is a process or substance that when applied to wood will keep it safe from dangers such as rot, insects or water damage longer than if the wood was left untreated. There are a large number of different chemical used to preserve wood.

There are several different compounds used based on the overall protection goal and use for the wood. The most common non-household substance is chromated copper arsenate (CCA). The CCA wood preservative uses copper as a fungicide and arsenic as an insecticide, while the chromium keeps them both in the wood. This makes the wood have a slight green color, a common sight on outside fences, decking material and power poles.

Since arsenic is so poisonous, many areas have moved away from new construction using CCA. In its place, most wood preservatives have gone to alkaline copper quaternary (ACQ) or copper azole (CA-B). These preservatives work in much the same way as CCA, but with less of its negative side effects. As a downside, the high amount of copper in ACQ destroys iron and steel, resulting in much more extensive construction costs.

Outside of copper, several other chemicals are used. Two of the more common non-copper compounds are borate and silicate-based. These provide adequate preservation but very little by way of insecticide. In addition, these chemicals leach out of the wood

when exposed to water, making them unusable in some areas.

Global key players of wood preservative treatment chemical include Arxada, Koppers Performance Chemicals, Wolman, Viance and Lanxess, etc. Several companies accounted for more than half of the global market. North America is the largest market, has a share about 43%, followed by Europe, with share about 36%. In terms of product type, Water-Based Wood Preservatives is the largest segment, occupied for a share of 74%, and in terms of application, residential has a share about 61 percent.
