## Abstracts

The global Wood Pulp market size is expected to reach \$ 80680 million by 2032, rising at a market growth of 4.2% CAGR during the forecast period (2026-2032).

Wood pulp is the most commonly used type of pulp, a material made by processing wood harvested from trees, and is the basis for manufacturing a wide variety of paper products. Different processes are used to cut wood into a form that is well-suited for making different types of paper products, including paper used for printing books, magazines, and newspapers. The resulting paper products can also be used to manufacture other paper products, including disposable paper plates, tissues, and other common household items.

The key players of Wood Pulp include Stora Enso, Suzano, APP, RGE and Sappi. The top four manufacturers hold above 30% of the global market share. In terms of product type, Hardwood Pulp is the largest segment, with a share of 57%. And in terms of application, Printing and Writing Paper has a share about 63 percent.

### Market Drivers:

**Wide Range of Applications:** Pulp is the basic raw material for papermaking, and it can also be used in synthetic fibers, plastics, coatings, films, and explosives.

**Changing Environmental Awareness and Consumer Habits:** With the global trend of 'plastic reduction,' reducing and banning petrochemical products is a future development trend. Packaging paper is an effective alternative to plastic packaging, therefore, the packaging paper sector has experienced rapid growth in recent years.

This report studies the global Wood Pulp production, demand, key manufacturers, and key regions.
