This report focus on Wood Sanding Machines market A sander is a power tool used to smooth surfaces by abrasion with sandpaper or sanding wheels. Sanders have a means to attach the sandpaper and a mechanism to move it rapidly contained within a housing with means to hand-hold it or fix it to a workbench. Woodworking sanders are usually powered electrically, and those used in auto-body repair work by compressed air, etc.

Wood Sanding Machines is equipment capable of shaping and smoothing surfaces, such as wooden boards. The machine consists of a base on which the workpiece rests; it also has two or more drums with Sandpaper attached to them that rotate at different speeds. It works by applying pressure against the rotating drum while moving the piece back and forth along its length – this ensures that all parts of the surface come into contact with one of the drums. For example woodworking machines for desks/chairs etc.
