A Wooden Oil Extraction Machine is a traditional type of oil extraction equipment that utilizes wood as a primary material for its construction. These machines have been used for centuries in various cultures for extracting oil from seeds, nuts, or kernels. While they may vary in design and construction, the basic principle remains the same: mechanical pressure is applied to crush the seeds or nuts and extract the oil. While wooden oil extraction machines may lack the efficiency and precision of modern mechanical or hydraulic presses, they are valued for their simplicity, affordability, and suitability for small-scale production in rural or remote areas. Additionally, their use of wood as a primary material aligns with sustainable and eco-friendly practices.
