Abstracts

According to our (Global Info Research) latest study, the global Workshop Material Management Software market size was valued at US\$ 3241 million in 2025 and is forecast to a readjusted size of US\$ 5803 million by 2032 with a CAGR of 8.8% during review period.

Workshop material management software assists various manufacturers and operators in managing production activities without the need to invest in expensive ERP systems. This type of software covers activities such as sales and purchasing, inventory management, light manufacturing, and—in some cases—equipment management and accounting. While process management software is accessible to all employees, it is particularly beneficial for production and inventory management teams. Workshop management solutions can be offered as a 'lightweight' version of an ERP system or as a standalone product. Since such software does not always include customer management or financial functions, integration with CRM and accounting software is crucial. To qualify for the 'Workshop Management' category, a product must meet the following criteria: provide manufacturing and assembly capabilities (such as Bills of Materials/BOMs); include workflows for assigning employees or teams to various activities; enable the creation and management of work orders based on customer requirements; manage the inventory of components required for production; and track production costs for each operation, work order, team, or customer.

With the development of Industry 4.0, smart manufacturing, and digital workshops, workshop material management software is becoming increasingly important. These systems enable real-time management of inventory, materials issuance, spare parts, and supply chain visibility, helping companies reduce inventory costs and improve

production efficiency. In the future, with accelerated digital transformation of SMEs and widespread application of Industrial IoT (IIoT), RFID, and barcode technologies, intelligent and real-time material management systems will become mainstream. Integration with MES and ERP systems is growing, enabling closed-loop management of production planning, material replenishment, and inventory optimization. Moreover, cloud deployment and SaaS models will allow SMEs to adopt software more flexibly while reducing IT costs. Over the next five years, the global workshop material management software market is expected to maintain steady growth with a CAGR of 8%–12%, with automation, intelligence, and data analytics being the key competitive factors, and market concentration likely to increase.
