The worm servo gear reducer is a precision transmission device that combines worm gear transmission with servo motor technology. It achieves efficient speed reduction and torque amplification through the meshing of the worm gear and worm, while using the servo motor to provide precise speed control and position feedback. This reducer not only has a self-locking function, which can prevent reverse drive in many cases, but also can significantly improve the dynamic response performance and control accuracy of the system. It is widely used in industrial automation, robotics, precision machine tools, aerospace and other fields that require high precision and high reliability.
