Abstracts

The global WS₂ (Tungsten di Sulfide) market size is expected to reach \$ 99.6 million by 2029, rising at a market growth of 6.5% CAGR during the forecast period (2023-2029).

Tungsten disulfide (WS₂) is an inorganic compound with the chemical formula WS₂. tungsten disulfide is a gray, metallic, fine hexagonal crystalline or powder. It is stable in air. Insoluble in water, soluble in nitric acid and hydrofluoric acid mixed acid. Soluble in molten alkali, insoluble in alcohol. Ammonium tungstate reacts with hydrogen sulfide gas and precipitates ammonium tetrathionate. The latter is then roasted at high temperature and decomposed into tungsten disulfide.

Tungsten disulfide is a new type of solid lubricant, suitable for lubrication under high temperature, high pressure, high load and high vacuum conditions. It can be added to engineering plastics to make self-lubricating components, or mixed with volatile solvents and sprayed on metal surfaces to improve die life and workpiece finish in stamping and forging.

The global production of tungsten disulfide is mainly distributed in North America, China and Europe, with China holding more than 60% of the market share. In the consumption perspective, Asia Pacific is the largest market with nearly 40% share, followed by North America and Europe with 30% and 24% market share respectively. The global key manufacturers of tungsten disulfide mainly include ALB Materials, Hunan Huajing Powder Materials, Bovas Nano Technology and Lowerfriction Lubricants (M K Impex), with the top three holding about 45% of the market share. Lubricants are the largest downstream field with over 55% market share, while petroleum catalysts and inorganic catalysts are also important applications with a combined share of about 20%.

WS2 is used as friction reducing agents for aerospace and aircraft components. In the injection molding industry, it helps to reduce friction during the molding process. The parts do not stick to the mold and release more quickly. It is also used for chains, end mills, bearings, and gear boxes, among many others.
