Abstracts

The global X-ray Ball Tube market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

X-ray ball tubes are usually made of metal, with tungsten wire or niobium alloy as the cathode and tungsten or copper as the anode. X-ray ball tubes in different application fields have different characteristics, including focus size, power and energy range, etc.

An X-ray ball tube is a device that generates X-rays. It consists of a cathode and an anode. By heating the cathode and applying high voltage, electrons are emitted from the cathode to the anode to produce X-rays. The workflow of the X-ray ball tube includes cathode emission, accelerated focusing, collision generation of X-rays, and X-ray emission.

This report studies the global X-ray Ball Tube production, demand, key manufacturers, and key regions.
