An X-ray Container and Vehicle Inspection System is a security screening technology designed for the thorough examination of cargo containers, vehicles, and other large items. Utilizing X-ray imaging, these systems can penetrate and visualize the contents of containers or vehicles, allowing authorities to identify potential threats, contraband, or anomalies. The technology is widely employed at border crossings, ports, and security checkpoints to enhance the detection of hidden items such as illicit goods, weapons, or dangerous substances. The system typically includes a powerful X-ray source and detectors that generate detailed images, offering security personnel the ability to conduct non-intrusive inspections without physically opening or unloading the containers or vehicles. This technology plays a crucial role in maintaining the security and integrity of transportation networks while facilitating the efficient flow of goods and maintaining safety standards.
