## Abstracts

According to our latest research, the global X-Ray CT Inspection Service market size will reach USD million in 2031, growing at a CAGR of %over the analysis period.

In X-ray CT inspection, the object being inspected is placed on a rotating platform and exposed to X-ray radiation from different angles. The X-ray detector captures the intensity of the X-rays passing through the object at each angle. A computer then processes this data to reconstruct a detailed 3D image of the object's internal structure. This service is commonly used in various industries for inspecting complex components, assemblies, and materials to detect defects, measure dimensions, and analyze internal features with high precision. X-ray CT inspection is particularly valuable for applications where traditional 2D X-ray imaging may not provide sufficient detail, such as aerospace, automotive, electronics, medical devices, and materials science.
