According to our (Global Info Research) latest study, the global X-Ray Lead Glass market size was valued at USD 127.6 million in 2023 and is forecast to a readjusted size of USD 141 million by 2030 with a CAGR of 1.4% during review period.

The shielding effect is created by a high concentration of lead and barium and the glass can be optically clear. The lead lined glass is manufactured in a variety of sizes, shapes and thicknesses depending on the intended application, the thicker the lead glass, the higher the level of radiation shielding. Radiation shielding glass provides protection while allowing technicians to view imaging or radiation therapy procedures and is used in permanent and modular shielding applications. Leaded glass can also be laminated to meet safety specifications for impact resistance.
