The global X-ray Secondary Battery Tester market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The production of these batteries is a complex process. Typically, it's a combination of mechanical engineering, chemical formulations, and sensitive electrical designs at cell and system levels. With such intricate processes, it's only proper that reliable quality control systems are used to confirm the functions of the battery's internal features.

Additionally, cells of high-performance batteries are so important that any defects can lead to catastrophic results. For years, x-ray has been used in battery inspection and product and quality control of battery cells. The battery x ray machine is an essential tool in detecting major faults inside the battery, including the latent ones that are usually difficult to detect using other inspection methods.
