According to our (Global Info Research) latest study, the global X-ray Sedimentation Particle Size Analyzer market size was valued at US\$ 39 million in 2024 and is forecast to a readjusted size of USD 59.3 million by 2031 with a CAGR of 6.5% during review period.

X-ray sedimentation particle size analyzer is based on Stokes' law, which states that under steady state, the sedimentation velocity of particles in liquid is proportional to the square of the particle radius, the difference between the liquid density and the particle density, and the gravitational acceleration, and inversely proportional to the viscosity of the liquid. By measuring the sedimentation velocity or the accumulated mass of the particles in the liquid, the particle size and distribution can be inferred.
