Abstracts

According to our (Global Info Research) latest study, the global Xenon Car Bulbs market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

It uses high-pressure xenon gas wrapped in quartz tube to replace traditional tungsten wire, providing higher color temperature and more concentrated lighting. Because xenon lamp is an arc light formed by activating xenon with high voltage current, it can continuously discharge and emit light between two electrodes. The power of ordinary automobile tungsten filament lamp reaches 55 watts, while the xenon lamp only needs 35 watts, reducing by nearly half. Xenon lamp can significantly reduce the burden of vehicle power system. The color temperature of automobile xenon lamp is between 4000K and 6000K, which is much higher than that of ordinary headlamp bulb. Its brightness is high. The light color of the 4300K xenon lamp is white and yellow. Due to the low color temperature, the visual effect is yellow, and the light penetration is stronger than that of the high color temperature lamp, which can improve the driving safety at night and in foggy weather.
