Xenon Lamp Aging Chambers are specialized testing devices that use xenon arc lamps to simulate sunlight exposure and environmental conditions for evaluating the durability and longevity of materials and products. These chambers replicate the effects of UV radiation, heat, and moisture, which can accelerate aging processes in various materials. The xenon lamp aging test chamber can simulate the solar spectrum: visible light and invisible light (ultraviolet and infrared), while the UV accelerated aging test chamber can only simulate ultraviolet in invisible light. The xenon arc test chamber simulates different light, temperature and humidity conditions to conduct aging tests on products, which can help us control the quality of the products.
