## **Abstracts**

Xylo-oligosaccharides, also named as XOS, is a type of functional polymer sugar composed of 2-7 xylose molecules bonded with (1-4) glycosidic bonds. XOS product specifications in the market: including: 95% XOS powder, 70% XOS powder, 35% XOS powder, 20% XOS powder, 70% XOS syrup.

Scope of the Report:

This report focuses on the Xylooligosaccharides (XOS) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Compared with other functional oligosaccharides, such as fructo-oligosaccharide (FOS) and galacto-oligosaccharide (GOS), the consumption of XOS in China increased quite slowly in recent years, due to its small serving size in downstream products and its low popularity among the Chinese public. Although FOS is currently the main functional oligosaccharide consumed in developed countries, its efficacy is not as good as that of XOS. Besides, the public's health consciousness in developed countries, such as the US, are higher than in China, which hints that products with health care function will be more popular in these countries.

It can be forecasted that the demand for XOS in developed countries will have a rapid growth in future for the feature of XOS is better than other functional sugar. Although Xylooligosaccharides brings a lot of opportunities, the study group recommends the new entrants just having money but without technical advantage and upstream and downstream support do not to enter into this field.

The worldwide market for Xylooligosaccharides (XOS) is expected to grow at a CAGR of roughly 4.1% over the next five years, will reach 120 million US\$ in 2023, from 94 million US\$ in 2017, according to a new GIR (Global Info Research) study.
