According to our (Global Info Research) latest study, the global YAG Solid-State Lasers market size was valued at US\$ 777 million in 2025 and is forecast to a readjusted size of US\$ 1193 million by 2032 with a CAGR of 6.4% during review period.

YAG Solid-State Lasers are solid-state laser systems that use yttrium aluminum garnet (Y₃Al₅O₁₂, commonly abbreviated as YAG) crystals doped with rare-earth ions?most commonly neodymium (Nd)?as the laser gain medium. These lasers are optically pumped, typically by flash lamps or laser diodes, to excite the dopant ions and generate laser emission. YAG lasers are known for their compact design, high beam quality, stable output power, long operational life, and reliability. They are widely used in industrial applications such as marking, cutting, and welding, as well as in medical treatment, cosmetic surgery, military systems, and scientific research. One of the most common variants is the Nd:YAG laser, which remains a leading type among solid-state lasers.
