The global Yarn Appearance Board Winder market size is expected to reach \$ 35.29 million by 2032, rising at a market growth of 2.9% CAGR during the forecast period (2026-2032).

Yarn Appearance Board Winder is a textile laboratory testing device used for inspecting the appearance quality of yarn. Its main function is to evenly wind yarn onto a blackboard or standard template according to specified tension, speed, spacing, and number of turns, forming a yarn arrangement template for visual observation and grading. This equipment is commonly used for quality control of cotton yarn, wool yarn, chemical fiber yarn, blended yarn, and other textile yarns. It is a common small testing instrument in spinning mills, textile testing institutions, university laboratories, and textile research and development units. This product is a mature textile testing device with relatively stable market demand. Technological upgrades mainly focus on automatic counting, stable tension control, variable frequency speed regulation, and standardization of the testing process. In 2025, the global production of Yarn Appearance Board Winder reached 22,300 units, with an average price of US\$1,254 per unit. The gross profit margin of major companies in the industry was approximately 25%-40%.
