Yogurt filtrate is an exfoliating ingredient derived from skimmed milk, *Lactobacillus bulgaricus*, and *Streptococcus thermophiles*. It contains skin-nourishing nutrients including carbohydrates, proteins, fat, minerals, and vitamins that help in boosting the skin organ.

The yogurt filtrate market refers to the market for a byproduct of yogurt production called yogurt whey or yogurt filtrate. When yogurt is made, it undergoes a filtration process to separate the solid curds from the liquid whey. The liquid whey, also known as yogurt filtrate, is a nutrient-rich liquid that contains proteins, lactose, and some milk fats. Yogurt filtrate has gained attention in recent years due to its potential as a valuable ingredient in various food and beverage applications. It contains bioactive compounds, such as peptides and amino acids, which have been associated with health benefits. Additionally, it can be used to enhance the nutritional profile, improve texture, and increase the protein content of products. The market for yogurt filtrate is driven by the increasing demand for functional food and ingredients, as well as the growing consumer interest in sustainable and waste-reduction practices. Food and beverage manufacturers are exploring various applications for yogurt filtrate, including in beverages, bakery products, dairy products, confectionery, and more.
