According to our (Global Info Research) latest study, the global Yttrium-based Superconducting Wire market size was valued at USD 239.7 million in 2022 and is forecast to a readjusted size of USD 391.9 million by 2029 with a CAGR of 7.3% during review period.

Superconducting wires are unique materials that have zero electrical resistance below certain temperatures called a transition temperature. This temperature changes depending on the material and other physical attributes of the wire. High temperature conducting wires are coated conductors that offer very efficient electricity handling below a set temperature level. Two of the most common materials for superconducting wires are bismuth strontium calcium copper oxygen (BSCCO) wires and Rare earth barium copper oxide (ReBCO) wires. However, second-generation wires are more refined and efficient formulas.
