Abstracts

The global Yuanming Powder market size is expected to reach \$ 2862 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

Yuanming powder, also known as saltpeter, is mainly composed of sodium sulfate (Na₂SO₄). It is a colorless crystalline or white powdery substance with hygroscopicity. Sodium sulfate has a high solubility in water and is easily soluble in water. Yuanming powder has a wide range of applications in industrial production, such as as a filler and solubilizer in industries such as papermaking, glass, printing and dyeing, and leather making. In addition, Yuanming powder also has certain medicinal value and can be used to alleviate symptoms such as constipation. Its chemical properties are stable and not prone to chemical reactions, so it has applications in various fields. In 2025, global Yuanming Powder production reached approximately 18,013 K MT, with an average global market price of around US\$ 114 per MT.

The overall market for Yuanming powder is closely related to the development of downstream industries such as detergents, glass, and textiles. With the stable growth of global demand for daily chemical products and the maintenance of a certain scale in the glass industry, the overall demand for Yuanming powder market remains stable. However, at the same time, the industry is also affected by environmental policies, resource utilization efficiency, and detergent formula upgrades. Some regions have adjusted the proportion of fillers to promote the development of enterprises towards high-purity products, refined applications, and comprehensive utilization of by-product resources. In the future, the overall market will focus on stable demand and gradually evolve towards high quality and multi-purpose direction.

This report studies the global Yuanming Powder production, demand, key
