## Abstracts

According to our (Global Info Research) latest study, the global Z-Folding Stacking Machine market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

At present, the stacking technology routes of lithium-ion batteries are mainly divided into four categories: zigzag stacking, cutting and stacking, hot composite stacking and rolling and stacking. Among them, zigzag stacking and cutting and stacking are essentially zigzag stacking, which is also the most widely used stacking process in China; the biggest feature of hot composite stacking is to achieve one-time complete slicing and stacking of positive electrode, negative electrode and diaphragm, which effectively improves the quality and production rate of stacking and battery cells, and is relatively more technically difficult; LG New Energy, for example, adopts rolling and stacking, which is more efficient but protected by LG patents.

Z-type stacking technology is a common stacking process at present. Its principle is as follows: through the movable stacking platform, the diaphragm is pulled back and forth between the stacking platforms to achieve cross stacking of positive and negative electrode sheets.
