The Zener safety barrier is a safety barrier based on the reverse breakdown performance of the Zener diode. It is directly connected in series with the signal line. When the power supply voltage or output current is greater than the energy-limiting threshold, the zener diode breaks down and conducts, and the safety barrier immediately enters the energy-limiting protection state to isolate the dangerous energy that may cause accidents from the scene. . Zener safety barrier is small in size, small in weight, high in precision, easy to install and cheap in price, and is widely used in automatic control systems.
