According to our (Global Info Research) latest study, the global Zeolite Rotary Concentrators market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Zeolite Rotary Concentrators are technical devices used to treat volatile organic compounds in the air. It uses a special adsorbent material, called zeolite, to capture and concentrate pollutants (usually VOCs) in the air. As the gases to be adsorbed pass through the wheel, they are adsorbed into the bed, thereby purifying the process gas. Zeolite rotor concentrator systems can be used to supplement the RTO process when the air flow to be treated is high and the solvent concentration is low.

Zeolite Rotary Concentrators can be used in industrial waste gas treatment, solvent recovery in the printing industry, paint spraying and other fields to reduce the emission of organic compounds and waste of resources.
