Abstracts

According to our (Global Info Research) latest study, the global Zero-Backlash Reducer market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Backlash, also called return clearance, refers to the distance difference between the output shaft's forward running position and the reverse running position when the reducer is running in reverse, which is also the degree of 'relaxation' of the output shaft when running in reverse. The so-called zero-backlash reducer adopts a full-contact transmission method, forming a zero-backlash structure close to 100% meshing transmission, thereby achieving extremely high reciprocating positioning accuracy.
