Abstracts

The global Zero Built-In Refrigerator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The driving factors for the development of zero-embedded refrigerators mainly include the following aspects:

Trend of home integration: As consumers' requirements for home environment increase, the integration effect of home appliances and home furnishings has become the focus of consumers' attention. The zero-embedded refrigerator can realize the integration of the refrigerator and the home, eliminating the problem of traditional refrigerators needing to reserve heat dissipation gaps after being embedded in the cabinet, and improving the aesthetics and integrity of the home. This integrated design also makes the home easier to clean and maintain.

Innovation in heat dissipation technology: Traditional refrigerators require gaps for heat dissipation on both sides, which not only affects the aesthetics of the home, but also creates dead spots for cleaning. By improving the heat dissipation technology, the zero-embedded refrigerator changes the heat dissipation on both sides to the bottom front heat dissipation, and it will not affect the heat dissipation efficiency even if it is close to the cabinet. This innovative technology solves the problem of heat dissipation gaps in traditional refrigerators and provides consumers with a more convenient experience.

Consumers' pursuit of high-quality life: As consumers' living standards improve, the pursuit of high-quality life has also become an important factor in purchasing decisions. The zero-embedded refrigerator satisfies consumers' pursuit of high-quality life with its high-quality and price-effective product performance and appearance design. At the

same time, zero-embedded refrigerators focus on humanized design, such as wider door opening angles and easier access to food, providing consumers with a more comfortable experience.

Driven by market competition: In the context of increasingly fierce market competition, major refrigerator brands are working hard to launch products with differentiated competitive advantages. As an innovative product form, zero-embedded refrigerators can improve brand image and market share. The investment and promotion of built-in refrigerators by major brands has also promoted its development to a certain extent.
