Abstracts

A zero-energy building, also known as a zero net energy (ZNE) building, net-zero energy building (NZEB), or net zero building, is a building with zero net energy consumption, meaning the total amount of energy used by the building on an annual basis is roughly equal to the amount of renewable energy created on the site, or in other definitions by renewable energy sources elsewhere. These buildings consequently contribute less overall greenhouse gas to the atmosphere than similar non-ZNE buildings. They do at times consume non-renewable energy and produce greenhouse gases, but at other times reduce energy consumption and greenhouse gas production elsewhere by the same amount. The Zero-Energy Building (ZEB) industry can be broken down into several segments, Lighting, Walls & Roofs, HVAC Systems, Others, etc. Across the world, the major players cover Kingspan Group plc, Canadian Solar, Johnson Controls International, Daikin Industries, AGC, Schneider Electric, Trane, SunPower Corporation, Honeywell International and Sage Electrochromics, etc.

This report studies the global Zero-Energy Building (ZEB) demand, key companies, and key regions.
