## Abstracts

According to our (Global Info Research) latest study, the global Zero Flux Current Transformer market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A zero flux current transformer is a device used to detect the current value called the zero phase current in a three-phase AC power supply. The sum of the vectors of the currents flowing in each phase of a three-phase AC power supply is normally symmetrical and thus zero, but when a ground fault current flows, the balance is disturbed and a non-zero value is obtained.

In the event of a ground fault, a zero flux current transformer is activated to immediately disconnect the fault location from the surrounding electrical circuit. For this reason, they are built into RCDs in advance and constantly play a role in detecting accidents.

This report is a detailed and comprehensive analysis for global Zero Flux Current Transformer market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
