Abstracts

According to our latest research, the global Zero Liquid Discharge (ZLD) Brine Treatment market size will reach USD million in 2031, growing at a CAGR of %over the analysis period.

ZLD technologies consist traditionally of brine concentrators and crystallizers that use thermal evaporation to turn the brine into highly purified water and solid dry product ready for landfill disposal or for salt recovery. Brine concentration technology refers to a set of processes and techniques used to increase the concentration of salt (sodium chloride) in brine solutions. Brine is a solution of salt in water, typically containing dissolved salts such as sodium chloride (NaCl), calcium chloride (CaCl₂), magnesium chloride (MgCl₂), and other minerals. Brine concentration technology is employed in various industries and applications, including desalination, water treatment, chemical manufacturing, food processing, and resource recovery. Brine concentration technology plays a crucial role in managing brine streams generated from various industrial processes, reducing wastewater volumes, and recovering valuable resources such as salt and minerals.
