Abstracts

According to our (Global Info Research) latest study, the global Zero Liquid Discharge (ZLD) market size was valued at USD 454.3 million in 2023 and is forecast to a readjusted size of USD 675.9 million by 2030 with a CAGR of 5.8% during review period.

Zero liquid discharge (or ZLD) is a type of wastewater treatment technique, wherein almost all of the wastewater generated is recycled and purified. This eliminates discharge of any liquid at the end of the process, resulting in zero discharge of water. The zero liquid discharge wastewater treatment comprises several processes such as reverse osmosis, ultrafiltration, fractional electrode ionization, and evaporation & crystallization. A well-designed, efficient, and effective zero liquid discharge wastewater treatment system should be capable of handling any fluctuations in waste contamination and flow rate and capable to recover around 95% to 99% of water for reuse.
