Abstracts

The global Zero Pressure Accumulation (ZPA) Conveyor market size is expected to reach \$ 484 million by 2032, rising at a market growth of 4.8% CAGR during the forecast period (2026-2032).

In 2025, global zero pressure accumulation (ZPA) conveyor production reached approximately 260 k meters, the average price is 1300 usd/meter.

Zero Pressure Accumulation (ZPA) Conveyor is an automated unit-load conveying system that divides a conveyor path into independently controlled accumulation zones and uses sensors, drives and control logic to stop cartons, totes, bags, tires, drums or pallets without significant contact pressure between adjacent loads. A typical system consists of a steel or aluminum frame, powered and idler rollers or independently driven belt sections, motorized drive rollers, Poly-V belts, O-rings or chain transmission, photoelectric sensors, zone controllers, DC power supplies, PLCs and industrial communication modules. Each zone normally holds one load and communicates its occupancy status to upstream and downstream zones, allowing products to accumulate, release individually or move in controlled groups. Principal specifications include conveyor width, zone length, roller pitch, load capacity, conveying speed, drive voltage, permitted product dimensions, accumulation density, release mode, environmental rating and communication protocol. This study focuses on roller, belt, chain-driven roller and pallet Zero Pressure Accumulation (ZPA) Conveyor systems supplied as standalone modules or integrated conveyor lines for warehousing, parcel distribution, manufacturing, packaging, sorting and automated material-handling applications.
