Abstracts

The global Zero Trust SDP market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Security needs: As network security threats become increasingly serious, organizations are paying more and more attention to network security. Traditional perimeter-based security protection measures can no longer meet existing security needs, because once an attacker breaks through the perimeter, the internal network will be completely exposed, resulting in serious security risks. Therefore, Zero Trust SDP, as a new security protection model, can better meet the security needs of organizations.

Business development needs: With the popularity of digital transformation and cloud computing, the business needs of organizations are constantly changing. Traditional infrastructure can no longer adapt to rapidly changing needs, and more flexible and secure solutions are needed to support the rapid development of business. Zero-trust SDP can provide more refined access control and identity management to better support the organization's business development needs.
