The global Zika Virus market size is expected to reach \$ 160 million by 2032, rising at a market growth of 3.0% CAGR during the forecast period (2026-2032).

Zika Virus Testing is a test tools for Zika virus, including the Nucleic Acid Amplification Test/ Molecular Tests; Zika Virus Antibody Test/ Serological Test. Zika virus (Zika) is a disease caused by the Zika virus, which is spread to people primarily through the bite of an infected Aedes species mosquito. The most common symptoms of Zika are fever, rash, joint pain, and conjunctivitis. The illness is usually mild with symptoms lasting for several days to a week after being bitten by an infected mosquito. People usually don't get sick enough to go to the hospital, and they very rarely die of Zika. For this reason, many people might not realize they have been infected. However, Zika virus infection during pregnancy can cause a serious birth defect called microcephaly, as well as other severe fetal brain defects. Once a person has been infected, he or she is likely to be protected from future infections. Zika virus testing is recommended only for certain people. People live in or traveled to an area with risk of Zika; People had sex without a condom with a partner who lives in or traveled to an area with risk of Zika; Pregnant women who don't have Zika symptoms lives in or traveled to an area with risk of Zika.

Global Zika Virus key players include Chembio, Quest Diagnostics, ARUP Laboratories, Luminex Corporation, Siemens, etc. Global top five manufacturers hold a share about 55%. North America is the largest market, with a share about 45%, followed by Europe, with a share about 30 percent. In terms of product, Molecular Test is the largest segment, with a share about 90%. And in terms of application, the largest application is Diagnostic Centers, followed by Hospitals, Pathology Labs.
