According to our (Global Info Research) latest study, the global Zinc Agriculture Micronutrients market size was valued at US\$ 1306 million in 2025 and is forecast to a readjusted size of US\$ 1996 million by 2032 with a CAGR of 5.9% during review period.

Zinc agriculture micronutrients are agrochemical products formulated with zinc as the active ingredient, applied via soil, foliar, or fertigation methods to correct zinc deficiency and optimize crop nutrition. In 2025, global zinc agriculture micronutrients production reached approximately 846,446 ton, with an average global market price of around USD 1,500 per ton. A factory gross profit of USD 300 per ton with 20% gross margin. A single line full machine capacity production is around 10,000 ton per line per year. The upstream is dependent on zinc metal, sulfuric acid and chelating agents. The downstream demand is concentrated in cereals and grain, plantation crops and oilseed and pulses. EDTA chelated zinc is sprayed to tomatoes and peppers to improve fruit set, quality and shelf life. US market is driven by advanced agricultural practices, large-scale commercial farming, and strong farmer awareness of soil nutrition make this a mature, high-value market. Germany and the Netherlands market are driven by the high tech farming sectors.
