Abstracts

Zinc alloy is an alloy composed of zinc as the basis and adding other elements. The alloying elements often added are aluminum, copper, magnesium, cadmium, lead, titanium, etc. Zinc alloy has low melting point, good fluidity, easy welding, brazing and plastic processing, corrosion resistance in the atmosphere, easy recycling and remelting of residual waste, but low creep strength, prone to dimensional changes caused by natural aging. Prepared by melting method, die-casting or pressure processing. Zinc alloys can be divided into cast zinc alloys and wrought zinc alloys according to the manufacturing process. Its material properties are suitable for making toy car models. Die Casting is the injection of molten metal into a Die (similar to a Mould) under pressure to create complex parts out of metal.
