A zinc carbon cylindrical battery is a specific type of primary (non-rechargeable) battery characterized by its cylindrical shape and construction. It features a zinc anode, a carbon cathode, and an electrolyte, typically ammonium chloride or zinc chloride, which facilitates the chemical reactions that generate electrical energy. These batteries are commonly used in low-power applications, such as remote controls, flashlights, and small electronic devices. While they are cost-effective and readily available, zinc carbon cylindrical batteries have a lower energy density and shorter lifespan compared to alkaline batteries. Their design and performance make them suitable for devices that require moderate power over extended periods.
