Abstracts

The global Zinc Sulfate market size is expected to reach \$ 956 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

Zinc sulfate (chemical formula: ZnSO_4) is one of the most important zinc salts; it appears as colorless orthorhombic crystals or a white powder. Its heptahydrate form ($\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$), commonly known as white vitriol, is a naturally occurring mineral. Zinc sulfate is readily soluble in water forming an acidic solution and soluble in glycerol, but insoluble in ethanol. Pure zinc sulfate does not yellow during prolonged storage in air; however, in dry air, it undergoes efflorescence, losing water to form a white powder. It forms various hydrates: the stable hydrate in equilibrium with water is $\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$ between 0°C and 39°C , $\text{ZnSO}_4 \cdot 6\text{H}_2\text{O}$ between 39°C and 60°C , and $\text{ZnSO}_4 \cdot \text{H}_2\text{O}$ between 60°C and 100°C . Upon heating to 250°C , the hydrates completely lose their water of crystallization; at 680°C , the compound decomposes into zinc oxysulfate ($\text{Zn}_3\text{O}(\text{SO}_4)_2$); it decomposes further above 750°C , ultimately breaking down into zinc oxide at approximately 930°C .

In 2025, global Zinc Sulfate sales volume reached approximately 0.91 million tons, with price of 720 US\$ per ton.

Agricultural micronutrient demand is the main growth driver. Zinc sulfate is widely used as a zinc fertilizer and micronutrient source to correct zinc-deficient soils, especially in cereal, rice, wheat, corn, pulses, fruit, and vegetable production. Demand is supported by the need to improve crop yield, plant growth, grain quality, and nutrient biofortification.

Soil zinc deficiency and food-security pressure are strengthening long-term

consumption. Zinc deficiency is common in calcareous, alkaline, sandy, highly weathered, and intensively cultivated soils, making zinc sulfate a practical input for crop nutrition programs. The zinc sulfate demand is being driven by the need to address zinc-deficient soils and states that zinc deficiency affects nearly half of the world's cereal-growing regions.

Animal feed is a stable secondary demand segment. Zinc sulfate is used as a feed-grade zinc source in livestock, poultry, aquaculture, and pet nutrition to support growth, immunity, reproduction, skin condition, and enzyme function. Fact.MR identifies animal feed micronutrient supplementation and agricultural fertilizer zinc enrichment as baseline demand drivers for the global zinc sulphate market. Feed-grade zinc sulphate demand is also supported by livestock production expansion and micronutrient fortification requirements.
